Clay Electric Cooperative, Inc.

A Touchstone Energy® Cooperative 

NEWS *IN BRIEF...*

CLAY ELECTRIC NOW ON FACEBOOK... With the growing popularity of Facebook, many businesses and organizations are using it to reach out to their customers. Electric co-ops aren't

watching from the sidelines. More than 130 electric co-ops are now on Facebook. Surveys show that co-op members are interested in receiving information about

their energy provider via Facebook, including restoration updates. In a nearby state, a co-op used Facebook to keep members updated on restoration efforts after an ice storm, and members reacted positively to the effort. Clay Electric joined the social networking site several months ago. The Member & Public Relations Department plans to use its Facebook presence to connect with members and others who 'like' us. Wayne Mattox, manager of communications, says the communication staff's ability to make use of multiple mediums is important. "We've been looking at expanding the ways we can communicate with our members, and we think Facebook will help," Mattox said. "While we hope the hurricane season doesn't send a storm our way, if a prolonged outage event does occur, we'll use Facebook to get restoration updates out to our members." If you're on Facebook, you can visit Clay's site at www.facebook.com/ClayElectric

TOMMY TOMLINSON, JOHN GOOLSBY RETIRE FROM CLAY ELECTRIC...

Two longtime employees of Clay Electric retired last month. Tommy Tomlinson, Keystone Heights district manager, retired on June 3 with 45 years of service. John Goolsby, lineman in the Operations Division, retired on June 2 after 30 years of service. Bill Thompson, director of District Operations, presented Tomlinson with a retirement plaque and a meter lamp during a retirement ceremony. Thompson said Tomlinson provided outstanding leadership and did an excellent job. "Clay Electric has benefitted from you being here," Thompson said. Board of Trustees member Susan Reeves expressed the board's appreciation of Tomlinson. "Clay is not just poles and wires, it's people," Reeves said. "Clay is well known among other co-ops and utilities for its high standards and service excellence, and employees like Tommy Tomlinson had a lot to do with that effort," she said. During Goolsby's retirement reception on June 2, Construction superintendent Mark Townsend said Goolsby was a hardworking employee with a high level of commitment. "We will miss John," he said. "He was definitely a dedicated employee with the division. Any time there was an outage, we always called John and he never complained a bit. We're thankful for the opportunity to work with him."

Tomlinson

Goolsby

KILOWATT

JULY 2011

VOLUME 42 NUMBER 4

KILOWATT is published six times a year (in January, March, May, July, September and November) by Clay Electric Cooperative, Inc., Highway 100 West, Keystone Heights, Florida, as an informational and educational service to its member-owners. SUBSCRIPTION RATE: \$1 a year, to Clay Electric members. Periodicals class postage paid at Keystone Heights, Fla. and at additional mailing offices. USPS 783-900; ISSN 1087-4747.

BOARD OF TRUSTEES

Meets July 28 & August 25 in Keystone Heights at 12:30 p.m.

Laura Dean - President
Keystone Heights - District 1
John Henry Whitehead - Vice President
Lake Butler - District - 7
Susan Reeves - Secretary
Hawthorne - District 3
Carl Malphurs - Treasurer
Alachua - District 4
Kelley Smith - Trustee
Palatka - District 2
Robert Mullins - Trustee
Starke - District 5
Floyd Gnann - Trustee
Middleburg - District 6
Cedrick Smith - Trustee
Micanopy - District 8
Angus Hastings - Trustee
Fort McCoy - District 9

Ricky Davis - General Manager & CEO

The General Manager's Report

Ricky Davis

Do you have a disaster plan?

Hurricane preparedness may not be the most riveting topic. When there's no immediate threat, no storm headed our way, it's easy to put things off.

For many of our members, the 2004 storm season was a major wake-up call on the importance of being prepared.

The hardships caused by Hurricanes Charley, Frances and Jeanne brought widespread power outages, flooding and property damage to North Florida. Electricity and the many conveniences it provides disappeared as howling winds brought trees and limbs crashing down upon our lines and equipment, resulting in widespread outages.

Complacency is natural, since it has been over five years since major storms struck this region.

Did you know last year's hurricane season was one of the busiest, based on the number of named storms? Due to weather and wind patterns, these storms mostly threatened shipping. We may not be so lucky this year. Forecasts predict an above-average hurricane season.

As we move further into the summer and the oceans continue to warm, our chances of seeing a hurricane rise dramatically. Now is a good time to make plans, and that is why we're providing this hurricane preparedness guide. It can help you make plans and ensure your family and property are secured should a major storm head our way.

This issue of the *Kilowatt* is filled with preparation tips and provides information about

storms and our power restoration process. We hope it is beneficial.

A few important tips:

- **Decide where you want to be during a hurricane**

This may be the toughest decision, so make it early. Authorities recommend you prepare well and stay home if you are not in an evacuation zone. If you decide to go to a shelter, a friend's house or a hotel, don't go too far or you'll risk getting trapped on grid-locked roadways.

- **Decide what to do if your family gets separated**

Have a designated meeting place, and a backup. Tell others about your plan. Tell at least two family members who live outside your area what you're going to do in case of a hurricane. If you're staying put, let them know and try to communicate with them afterward. If you're leaving town, tell them where you're going. If you change plans, let them know.

- **Involve the entire family**

Involve everyone in the family, especially children, in your preparations. Each family member should have responsibilities so work is shared and nothing is overlooked. You're all in this together.

- **Make preparations for children**

Decide now who picks them up from school during a storm threat if both parents work. Start helping them now to deal with any fears: explain what a hurricane is, what it can do, and what preparations you are making.

- **Prepare for those with special needs**

Make

arrangements right away for family members who are elderly or who have special needs. Remember, if someone depends on electrical life support, there probably won't be power after a storm. Contact your local Emergency Management Office for details.

- **Find out if you'll have to work**

If your job requires you to work during a storm, make sure that when the hurricane hits, at least one parent or adult relative will be with the children or adults with special needs. Government agencies and some companies can require some people to work through a storm. If you can't be excused from work, make other arrangements for your family's care. Some companies allow emergency workers to bring their families to the job for shelter. Find out now.

- **Keep some emergency cash**

A hurricane will disrupt banking schedules. ATMs and credit cards, in a world without electricity, will not work or will run out of cash.

- **Buy supplies early**

Planning is key to avoiding price gougers who appear after calamity strikes. Buy as many supplies as you can, especially big-ticket items like generators, before a hurricane threatens and demand skyrockets.

Hurricane

Special Section

Clay Electric Co-op offers this information to help you protect your loved ones and property when a hurricane threatens our region.

DON'T WAIT...

until the last minute to begin preparations. Stock up on needed items at the beginning of the hurricane season and take necessary steps to protect your family and home when the first watches are issued.

Things to consider before the storm hits

1 A **Hurricane Alert** is announced when a hurricane poses a possible threat to an area. If the hurricane is believed to be an appreciable threat, the area is put on a Hurricane Watch. Tune to your local news station for further advisories. Safety precautions should be started if an Alert is announced.

A **Hurricane Warning** is issued when it is expected an area will be hit by a hurricane. At this time, all safety precautions should be taken. If you live in a low-lying area prone to flooding, be ready to evacuate early. Pre-storm rains and flooding may cut you off if you don't move soon enough.

If you are asked to evacuate, do so as quickly as possible. Bring necessary medications and such children's needs as diapers and baby food. Also bring blankets and pillows. Understand that most shelters do not allow pets.

Stay away from beaches or other low areas which may be flooded by high tides. Haul boats out of water and tie down or strongly moor them.

Mobile homes are particularly vulnerable to winds of hurricane force. You should move to safe shelter when a hurricane warning is given. You may want to secure all outdoor objects and awnings over doors and windows, and tape or board windows and doors. Do not stay in your mobile home during a hurricane.

Stay at home if your house is safe from high water and flash flooding. Bring in everything that could blow away – garbage cans, garden tools, furniture and plants. Remove limbs from trees that could damage your house or utility wires. When you're taking down limbs or antennas, keep in mind that even the slightest contact with a power line can cause a fatal electrical shock.

Turn your refrigerator and freezer to colder settings. Open only when absolutely necessary and close quickly. If used carefully, a good refrigerator/freezer can maintain food-preserving temperatures up to two days without electricity. Fill empty spaces with frozen plastic jugs of clean water.

Prepare your emergency water supply. Sterilize the bath tub and other jugs, bottles, pots and other containers. Scrub thoroughly, let dry and fill with water. Boil this water before drinking.

Secure garage doors, shutters, awnings and brace sliding glass doors and French doors. Board windows securely with plywood.

"Failure to prepare for a hurricane could be the difference between life and death. Ultimately, if individuals don't create their own hurricane plan, this is all for naught. We live in paradise, and that is the price we pay."

- Former Florida Gov.

Jeb Bush, speaking at the 2005 Governor's Hurricane Conference in Tampa.

Hurricane Checklist...

- Battery-powered radio
- Extra batteries
- Flashlights
- Extra flashlight bulbs
- Lantern
- Fuel
- Matches
- First aid kit
- Bleach
- Plywood to cover windows
- Emergency cooking supplies
- Manual can opener
- Pantry well stocked with canned goods, drinking water, baby food, etc.
- Extra medicine
- Extra ice in freezer
- Tub filled with water
- Full tank of gas in vehicle
- Important papers in a water-proof and portable container
- Pets protected or inside
- Loose outside objects stored or secured
- TV antenna taken down

Things to consider during the storm

2 **Stay indoors.** Don't go out at all, except in emergencies. **Stay tuned to your local news station** for up-to-the-minute advisories and remain indoors or in a shelter until the all clear announcement is given. Use your phone for emergencies only.

If the electricity goes out, use flashlights instead of candles or kerosene lamps when possible. Be careful with cooking flames. A gust of wind through a door or window could start a fire and the fire department may not be readily available during the hurricane.

If the eye of the hurricane passes directly over your area, skies may clear and there may be a lull in the wind that lasts a few minutes or a half hour. Remain in a safe place. If absolutely necessary, make emergency repairs quickly. Be careful, the wind will return from the opposite direction suddenly and maybe with even greater force.

Things to consider after the storm

3 **Stay away from disaster areas** so you don't hinder first aid or rescue work. **Be on the alert for rising water** in streams and rivers even after the heaviest rain has ended.

Stay away from broken or low-hanging power lines, as well as metal objects which may be in contact with damaged power lines.

Be assured your co-op will restore electric service as quickly and safely as possible. The co-op has an emergency plan to follow that allows power to be restored to as many customers as quickly as possible. First, power is restored to substations. Next, main feeder circuits are brought back on line. Then work crews repair secondary lines and tap lines. Finally, individual customers still without power are concentrated on. See story on page 5 for more about this topic.

If you have lost power during the storm, it is not necessary for you to immediately call and report your power outage. Clay Electric's automated equipment identifies main feeder lines that are not in service. You're asked to help keep the phone lines open for emergency calls only. If your neighbors have had their electricity restored and you're still without power, please call the co-op's outage reporting line at 1-888-434-9844.

If you use a portable generator during an extended outage, do not connect it to your home's wiring unless your home is equipped with a double throw-back switch installed by a licensed electrician and you understand its proper use. For more about portable generators, please see additional information in this section.

To report an outage or damage on Clay Electric's lines, call our toll free outage reporting line, 1-888-434-9844.

For life-threatening situations, call 911.

To view outages in our service area, visit our online outage map at clayelectric.com.

Restoring your power after the storm - a look at the restoration process

If a hurricane should cause widespread power outages in Clay Electric's 14-county service area, co-op personnel will be involved in the power restoration process even before the storm leaves the area. They will continue their efforts, with the help of many crews from other areas of Florida and from other states, until your power has been restored.

Understand the co-op's concern for the safety of its employees means no outdoor work will be performed during dangerous high-wind conditions. As soon as conditions allow, employees will be out in force assessing the damage to the system and getting the restoration effort underway.

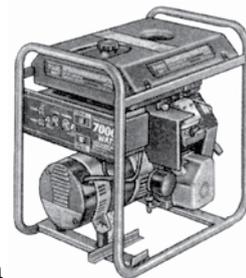

Electric utilities follow a specific restoration plan during widespread power outages. The first step is repairing transmission lines, which carry high voltage electricity from generating plants to transmission substations. Transmission substations are also among the first items to be repaired.

Next to receive the attention of repair crews are the distribution substations and their respective main feeder lines. The co-op has over 50 substations on its system and there are about 12,000 miles of distribution lines, which carry power out from the substations to homes and businesses.

Continued on page 7

Important information on the safe & proper operation of generators

The power outages caused by hurricanes in recent years have created a lot of interest in generators. If you are shopping for a generator or have already purchased one, please keep the following information in mind.

Safety First

It is extremely important to follow all the instructions provided by the manufacturer of the generator. An improperly connected generator can create a dangerous situation because it can backfeed electricity into Clay Electric's distribution system. This situation could result in serious injury or death to an unsuspecting co-op lineman, a neighbor or family member. Never operate a generator inside an enclosed area. Carbon monoxide gas produced by a gasoline or propane engine can cause death. Generators should be operated in well-ventilated areas, a minimum of 10 feet from operable windows and doors.

A word of caution: Residential portable generators are not designed to be operated continuously. We recommend running a generator during emergency situations for a few hours, then shutting it off for a short period of time. This helps conserve gas/propane since they may not be readily available for the first few days after a major storm. Never leave a generator running when the home is unoccupied. Also, portable generators should be run for 10 minutes monthly to prevent stagnant gas from gumming up the carburetor.

About Generators

There are two basic types of generators – (1) Portable and (2) Standby.

Portable generators are designed to supply auxiliary power to specific appliances/equipment using extension cords. Most portable generators are mobile, gasoline fueled and electric or manually started. They may cost from \$500 to \$2,000 or more. The rated wattage of portable generators is from 1,500 to 15,000 watts.

Stand-by generators are designed to be hard-wired to the home's electrical system. They automatically operate when there is a power interruption and they shut off when the utility power is restored. They are powered by LP, natural gas, diesel fuel or gasoline and they should be installed by a licensed electrician. The installed cost of standby generators may range from \$3,000 to \$10,000. The wattage ranges from about 5,000 to 20,000 watts for residential use.

For both types of generator, the size (watts) of the generator determines the number of appliances/equipment you can safely operate at one time. Any appliance/equipment with a motor or compressor will draw more current during start-up than during normal run time. The start-up of these motor/compressor loads must be considered when sizing a generator for your needs. The extension cords used with a portable generator also should be properly sized to handle the electrical requirements of the appliance. See the appliance usage chart on the next page to help you determine the total amount of watts you may need.

Standby generators use a transfer switch designed to connect certain electrical circuits within a home to the generator. You must determine which electrical circuits you want to be supplied with auxiliary power. A licensed electrician should install the transfer switch. The standard transfer switch costs between \$300 and \$500 and has the capability of connecting 6 to 12 circuits to the generator.

A new type of switch now available for portable generators is the "meter-based" transfer switch. It costs between \$600 and \$800. The meter-based transfer switch allows operation of any circuits in the home up to the capacity of the switch and generator.

How Should I Maintain the Generator When Not in Use?

Gasoline with ethanol as an ingredient can damage parts of a generator's engine and cause seals to deteriorate if this fuel is left in the engine for long periods. However, if you drain the gas and leave the engine empty, the o-rings can dry out and cause the gas tank to leak. To avoid seal damage, use a fuel stabilizer and run your generator monthly for 10 minutes.

Appliance Usage Guide

Use this Appliance Usage Guide to estimate the power requirements of various appliances/equipment. This will help you determine the size generator you may want to purchase.

Appliance/Equipment	Running Watts (avg.)	Starting Watts (avg.)
Water Pump ½ HP	1,000	3,000
Water Pump ¾ HP	1,500	4,500
Sump Pump	1,000	3,000
Refrigerator	750	1,500
Freezer	500	1,000
Microwave	600-1,500	
Lights	40-200	
Television	150-400	
Radio	6-15	
Oscillating Fan	50-100	
Water Heater	4,500	
Coffee Maker	750-1,200	
Toaster Oven	1,100	
8000 BTU AC (window unit)	1,000	3,000
3 Ton A/C or Heat Pump	6,000	32,400
Garage Door opener	500	
Computer	120	
Fax Machine	50-1,000	
Home Security System	24	

This appliance usage guide is the estimated average usage of electrical equipment. Generators have to be sized large enough to handle the starting wattage of motorized equipment. A 5,000 watts generator will handle the operation of appliances listed above except the 3 ton A/C or heat pump. All appliances can't be in operation simultaneously but you can control the sequence of operating time.

Restoring power...

From page 5

The number of members served by each of Clay Electric's distribution substations can range from a few hundred to nearly 9,000 – so getting the substations back in service is essential. Individual tap lines are next in the restoration plan because they serve the fewest number of members.

Essential Service Accounts include hospitals, law enforcement, fire, radio and television stations, cell towers and water providers. Of course, these accounts are given a priority status in the restoration process because they are essential to community safety, health, and communications.

Rebuilding large portions of a distribution system that stretches into 14 counties takes time, and the understanding and patience of members during a time of extended outages is helpful.

Hurricane names for 2011

A storm must start as a Tropical Depression and move on to become a Tropical Storm before it is given a name. Once a storm is named, preparations for the possible hurricane should be well under way.

Here is the list of hurricane names for 2011: Arlene, Bret, Cindy, Don, Emily, Franklin, Gert, Harvey, Irene, Jose, Katia, Lee, Maria, Nate, Ophelia, Philippe, Rina, Sean, Tammy, Vince and Whitney.

If we're unlucky enough to deplete the year's supply of names we won't simply start using names from next year's list, contrary to popular belief. In that case, the National Hurricane Center will turn to the Greek alphabet and we'll have Hurricanes Alpha, Beta, Gamma, Delta, etc.

HELPFUL WEBSITES...

The Florida Division of Emergency Management: floridadisaster.org

The National Weather Service: nws.noaa.gov

The National Hurricane Center: nhc.noaa.gov

The Federal Emergency Management Agency: fema.gov

Accuweather: accuweather.com

Test your hurricane I.Q.

1. A hurricane is immediately preceded developmentally by which of the following?
 - a. A tropical wave
 - b. A tropical depression
 - c. A tropical trough
 - d. A tropical storm
2. True or false? You should leave one window open during a hurricane to prevent your house from exploding.
 - a. True
 - b. False
3. By what scale is a hurricane's strength measured?
 - a. Fujita
 - b. Richter
 - c. Saffir-Simpson
 - d. Mercalli
4. In the Northern Hemisphere, which direction do a hurricane's winds rotate?
 - a. Counter-clockwise
 - b. Clockwise
5. Most of a hurricane's damage results from?
 - a. Storm surge
 - b. Wind
 - c. Rain
 - d. Tornadoic activity
6. How many Category 5 hurricanes have hit the United States since 1899?
 - a. 3
 - b. 4
 - c. 5
 - d. 6
7. On average, what are the peak months of the hurricane season?
 - a. June/July
 - b. July/August
 - c. August/September
 - d. September/October
8. What was the costliest hurricane in U.S. history?
 - a. Camille
 - b. Opal
 - c. Katrina
 - d. Andrew

Answer Key:

- 1(d) 2(b) 3(c) 4(a) 5(d) 6(a) 7(c) 8(c)

Additional preparation tips to consider...

Additional things to consider as you make your hurricane preparation plans that could help you better cope with an extended outage.

- When freezing water in containers to help keep your food cool during an extended outage, use the largest containers you have room for. Larger blocks of ice last longer than cubes or crushed ice. Keep an ice pick handy in case you need to chip the ice into smaller chunks.
- Buy battery-operated fans (one per person) and lots of batteries to operate them.
- Buy a cot and sleep in the coolest spot in the house. Sleeping on the floor or on an air mattress offers no breeze or draft.
- Cell phones are a lifesaver, but not necessarily when a hurricane knocks out the power. An old-fashioned telephone that's plugged into the wall may be invaluable when the phone batteries die. And don't use your cell phone as a "flashlight" during a power outage, because the battery dies faster. In a pinch, you might be able to charge your cell phone in the car (don't run the vehicle's engine in an enclosed garage!).
- Buy a small flashlight that can be worn around your neck, or a clip-on light that can be attached to a cap. This will help you avoid stumbling around in the dark looking for a flashlight.
- You have power but your relatives don't, and they're on their way? Ask them to bring extra food and supplies so there won't be any shortages at your home. A hurricane is enough of a stress, and to run short of supplies because of the extra mouths to feed can make things even worse.
- Keep an extra tank of propane on hand for the gas grill or cooker during the hurricane season.

A small flashlight that clips to your cap might be a useful item.

- Easy Zucchini Stuffed Shells**
- 2 medium zucchini, grated
 - 1 12-oz box jumbo shells
 - 2 16-oz containers cottage cheese
 - 1 tsp oregano
 - 1/4 tsp pepper
 - 1 16-oz jar of prepared spaghetti sauce with mushrooms
 - 1/2 cup tops of green onions, chopped
 - 1 15-oz container Ricotta cheese
 - 8 oz mozzarella cheese, shredded
 - 1 tsp garlic salt
 - 2 eggs, beaten

Cook noodles according to package directions. Mix ricotta, cottage cheese & half the mozzarella; add beaten eggs, then stir in zucchini & onions. Add spices & garlic salt. Stuff each shell & place into greased casserole dish. Top with spaghetti sauce & bake at 350 for 35 minutes. Remove from oven & sprinkle with other half of mozzarella cheese. Serves 6.

From our friends at the Windsor Zucchini Festival

Students enjoy visit to Washington, D.C.

Clay Electric's four Youth Tour to Washington contest winners enjoyed an activity-filled five days visiting the nation's capital.

When they arrived in Washington on June 11, the students joined a larger group from Florida to begin their tour of monuments, museums, legislative buildings and historic landmarks. They were accompanied by Edwina Painter, department secretary in Member & Public Relations, and her husband, Anthony.

Thirty students from 10 Florida electric cooperatives toured the Capitol, White House, National Cathedral, the Smithsonian, Holocaust Museum, war memorials, and many other historic sites. Since 1964, the nation's electric co-ops have sponsored more than 40,000 high school juniors for visits to their U.S. congressional delegations, energy and grassroots government education sessions, and sightseeing in Washington, D.C.

Each year 26 juniors are selected by their schools within the 14 counties served by Clay Electric. All 26 visit Tallahassee in February; while there, they take a written quiz and participate in a speech contest to compete for the Washington, D.C. trip.

This year's winners of Clay's Youth Tour to Washington trip contest were Natalie Jones, P.K. Yonge; Hannah Emerson, Santa Fe High School; Anna Shao, Orange Park High School; and Chelsey Hendry, Columbia High School.

On the first afternoon, they toured the World War II memorial and the Holocaust Museum. On Sunday, they visited

Arlington National Cemetery. Later, the group visited the Capitol and then set off for tours of the Korean, Lincoln, Vietnam, FDR and Jefferson memorials.

On Monday, the students participated in Youth Tour program activities at the Hyatt

Hotel, saw Pentagon City, the National Cathedral and visited the Newseum. That evening, the group took part in a Potomac River cruise and dance.

Tuesday's activities included a visit to George Washington's Mount Vernon home. That evening they watched the Marine Corps Sunset Parade at the Iwo Jima Monument.

Wednesday's itinerary included a tour of the Capitol and meeting with Congressmen Jeff Miller, Steve Southerland and Tom Rooney. That evening the students took in the musical "Wicked" at the Kennedy Center.

The next morning, the students flew home, and on their flight they wrote down some thoughts about the trip.

Anna Shao said she would highly recommend the trip to her fellow classmates. She especially enjoyed learning about American history, first in school and then on the trip.

"This program is spectacular!" she wrote.

Hannah Emerson said the trip was a phenomenal experience.

"I learned so much from the speakers, tours and museums,"

Congressmen Tom Rooney, Steve Southerland and Jeff Miller spoke to Florida's group of Youth Tour students.

she wrote.

Natalie Jones expressed appreciation for the opportunity to visit Washington, D.C.

"I want to thank Clay Electric and everyone who helped make it possible," she wrote. "This is a trip I am going to be raving about for a very long time."

Chelsey Hendry felt it was an honor to be selected and was grateful for the many new experiences she was able to have.

"From having my first flight, to touring our nation's capital, to meeting new people from all over the country, I am thankful for everything I experienced this week," she wrote.

Edwina Painter said Clay's students were outstanding.

"The girls were just great," she said. "They were interested in everything we did and had a terrific time. I think they learned a lot from this first-hand experience and they will remember this trip for a very long time."

SCRIPTURE

A prudent man sees danger and takes refuge, but the simple keep going and suffer for it.

Proverbs 22-3
