Clay Electric Cooperative, Inc.

A Touchstone Energy® Cooperative 

NEWS IN BRIEF...

CLAY TRUSTEE HONORED...

Clay Electric board of trustees member Angus Hastings was honored during a regional meeting of the Florida Electric Cooperatives Assn. in Clearwater on Aug. 5. Statewide President William Rimes presented Hastings with a flag that was flown over the Capitol at the request of Congressman Allen Boyd, to honor Hastings' service in World War II, and for his 35 years of service as NRECA

Angus Hastings with his awards.

director for Florida. Hastings received a special flag certificate and the special flag, folded and placed in a display box. He also received a hand-painted picture representing when electricity first arrived at the Hastings ranch. Hastings served as president of the National Rural Electric Cooperative Association in 1981-82. He has served as chairman of the Florida ACRE program since its inception in 1966. He served as chairman of the statewide Legislative and Public Affairs Committee for many years, and he has also served on the Cooperative Finance Corporation's board of directors. "It was truly an honor and an evening I'll never forget," Hastings said. "I truly thank Clay Electric's members (in District 9) for electing me as their representative on the board all these years."

SEVERAL ITEMS ADDED TO ENERGY REBATE PROGRAM...

Several new items have been added to Clay Electric's Energy Smart Rebate Program to encourage members to use energy more efficiently. One new item is window film and another is radiant barriers. Window film will be rebated at \$0.44 per square foot of glass. To qualify, the window film must provide a SHGC of < .45 with film applied to southern, western and eastern oriented windows. Rebates for radiant barriers will be calculated as the conditioned ceiling area (not roof area) at \$0.28 per square foot. The radiant barrier must be hung from the roof rafters and not placed atop the attic insulation in order to qualify. The co-op is also offering a \$200 rebate for the installation of a heat recovery unit, which connects a heat pump to a water heater. There's also a \$175 rebate offered for the installation of a heat pump water heater. Applications for rebates must be made within 60 days of the date of installation. For more information, call Clay Electric's Energy Services Division at (352) 473-8000 x8263.

CO-OP OFFERS EMAIL BILLING PROGRAM... With Clay eBill, co-op members can receive electric bill statements via email instead of getting a paper bill statement in the mail. The monthly email includes the bill statement as a PDF attachment and links to important information from the co-op. Clay eBill participants can pay the bill online by clicking the "pay my bill" link in the email, or utilize any of the co-op's other payment options.

The General Manager's Report

Ricky Davis

The people you send to Tallahassee and Washington will decide critical energy issues

You can't miss the fact this is an election year, with the TV channels saturated with scores of campaign ads touting this or that candidate. And the campaigns will only get more intense as the November general election date nears. The political pundits are offering up their opinions as well, in an effort to sway us toward one candidate or another. It's really enough to make your head spin.

But make no mistake - this is an important election season. Decisions we make in the voting booth in November can have far-reaching consequences. Who we choose will determine the amount of taxes we pay as individuals, the amount of rules and regulations we face as business owners, and even how much we'll pay for electricity in the years ahead as consumers.

It's important that we know the positions of the candidates come Nov. 2. We all have specific issues that we use to judge the qualifications of the candidates we intend to support. Some of us look at a candidate's position on one issue, while others might judge a candidate's position on multiple issues.

Participating in the electoral process means we must be informed, and we should know whether or not the people we vote for are likely to look out for our interests when they travel to Tallahassee or Washington to represent us. As we

have learned over the years, decisions made in Tallahassee and Washington can affect all of us, through new rules and regulations, new taxes, and a myriad of other ways, including even our health care.

That's certainly the case with energy. Over the years, a variety of local, state and federal fees and taxes have been added to consumers' electricity bills. These fees and taxes have little or nothing to do with the cost of generating power or providing service. They just create revenue for the various levels of government.

The Florida Legislature will likely face some critical energy issues during its 2011 session. In Congress, lawmakers will likely face efforts to pass a Cap-and-Trade bill, and may be asked to rein in the federal Environmental Protection Agency (EPA) before it regulates carbon dioxide and other greenhouse gases. These issues could have a huge impact on the future cost of electricity, as well as the price you pay for other forms of energy.

To help you sort out the positions of the various candidates to state and federal offices on these energy questions, our Member & Public Relations Department created four questions (two for state offices and two for federal offices) and sent them to the candidates facing elections in November. The candidates that received the survey represent districts within our 14-county service

area.

For state candidates, we asked them if they favored allowing utilities to use a diversified generation fuel mix (coal, natural gas, nuclear, renewables, etc.) to produce electricity. The state has pushed utilities into relying more on natural gas as a generation fuel. It's cleaner burning than coal, but if a supply shortage occurs (due to a hurricane, for example), utilities would be hard pressed to keep the power flowing. The second question involves the imposition of a Renewable Energy Portfolio, which would force utilities to obtain up to 20 percent of their electricity from renewable energy sources, which are more costly forms of generation.

For the federal candidates, we asked them if they felt the EPA should regulate greenhouse gases (rather than Congress), and their position of Cap and Trade legislation, which would impose a cap on carbon dioxide emissions and create a trading scheme for CO2 emissions credits.

We urge you to consider the candidates' positions on these issues, because the people you send to Tallahassee and Washington will make decisions that will impact your cost of electricity in the years ahead.

We encourage you to vote on Nov. 2. Please, carefully consider the candidates and the issues, and choose wisely.

Candidates respond to energy questions

Members of Congress and the Florida Legislature will likely be considering some important energy issues next year in Washington D.C. and in Tallahassee. To help Clay Electric members better understand the candidates' positions on some of these energy issues, we asked current elected officials and those seeking office to respond to two energy-related questions.

We sent two questions to the incumbents and candidates of the U.S. Senate and House seats in our North Florida service area, and two different questions to the Florida Senate and House seats in our North Florida service area, and to candidates in the governor's race. The questions, and the responses to those questions, are listed below.

Federal Questions:

Question F1: The U.S. Environmental Protection Agency wants to regulate Green House Gas emissions - including carbon dioxide emitted by power plants. The EPA's rules would result in higher priced electricity for consumers and businesses across the nation. Knowing this, do you support the EPA's efforts to regulate GHGs? Who should have the authority to regulate GHGs?

Question F2: Cap and Trade legislation would impose a cap on the amount of carbon dioxide that industries can emit, and allow companies to buy and trade emissions credits. Cap and trade legislation would result in higher power costs and cause job losses. Knowing this, should the U.S. Senate and U.S. House of Representatives impose cap and trade legislation on this nation?

State Questions:

Question S1: For decades Florida utilities relied on a diversified mix of generation fuels (coal, natural gas, nuclear, etc.) to avoid supply interruptions due to storms, for example, and ensure power reliability. In recent years, however, the state has adopted policies which have forced utilities to depend more on natural gas due to its lower emissions. Do you support limiting the types of fuels utilities can use, knowing that this policy could lead to less reliable power generation and higher electricity costs for consumers?

Question S2: There have been proposals in the Legislature to enact a Renewable Energy Portfolio, which would require utilities to obtain up to 20 percent of their generated electricity from renewable energy sources like solar, biomass and landfill gas generation. Renewable energy is a less cost effective form of energy generation and would lead to higher priced electricity for consumers. Knowing this, would you support a Renewable Energy Portfolio for state utilities?

For candidates that Did Not Respond to the survey, DNR is indicated.

U.S. Senate: Marco Rubio (R), DNR; Kendrick Meek (D), DNR; Charlie Crist (I), DNR.

Florida Governor:

-Rick Scott (R), QS1: I don't believe in the government picking winners and losers in business or the market place. I will support policies that give utility companies as many energy generation options as possible while not adversely affecting Florida's environment. Utilities need the ability to employ a diverse means of energy generation in order to provide an affordable and reliable product. QS2: I support the development and implementation of alternative energy sources; however, I believe that the market should dictate to what degree it's utilized by utility companies. As we move toward energy independence, alternative energy will need to play an important role. I believe the private market will continue to develop alternative energy sources, driving down the cost. When alternative energy generation is no longer cost prohibitive, utility companies will logically increase its role in providing electricity to their customers.
-Alex Sink (D), DNR

U.S. House of Representatives District 2:

-Steve Southerland (R), challenger, QF1: I do not currently support the EPA's effort to regulate GHGs. Congress should set the rules and regulations for the EPA and the ultimate authority should rest with Congress - the representative body of the United States. QF2: I do not believe that Congress should impose the Cap & Trade legislation.

-Rep. Allen Boyd (D), incumbent, DNR

U.S. House of Representatives District 3:

-Michael Yost (R), challenger, QF1: No, I do not. With the status of our economy and how badly individuals and businesses are struggling, more cost can be nothing but negative. Unlike Representative Brown I care about the people, and know how hard it is for some to just make ends meet. Who should have the authority to regulate GHGs? Each individual state. It is not a federal issue. QF2: No.

-Rep. Corrine Brown (D), incumbent, DNR

U.S. House of Representatives District 4:

-Troy Stanley (D), challenger, QF1: I do not sup-

port the EPA's regulation of GHGs. The Florida State Department of Environmental Protection is the only entity that should have the right to regulate GHG's in Florida. QF2: Absolutely not! I have personally signed and support the *No Climate Tax Pledge*.

-Rep. Ander Crenshaw (R), incumbent, DNR

U.S. House of Representatives District 6:

-Rep. Cliff Stearns (R), QF1: I strongly oppose the EPA's attempt to regulate GHGs in what would likely be the most expensive and expansive environmental regulation in history. This action would give the EPA unprecedented regulatory control over everything from power plants to automobiles and could cripple the domestic energy industry and our national economy. QF2: I have great concern that any cap and trade program would be rampant with fraud and abuse while achieving very little actual measurable reductions in GHGs. And without equivalent efforts by other nations, the U.S. stands to lose hundreds of thousands of jobs. As a senior member of the Energy and Commerce Committee, I will continue to oppose any cap and trade legislation that would undercut the growth and innovation our economy needs.

-Steve Schonberg (D), challenger, DNR

Florida Senate District 14:

-Perry McGriff (D) challenger, QS1: In these tough economic times we have to always consider the impact of our decisions on the average rate-payer in Florida. Working toward a reduction in the amount of carbon emissions being produced is important for the health of our environment, but it should not come in advocating for a philosophy of putting all your eggs in one basket or placing an undue economic burden on those already struggling to pay their bills. Maintaining diversity in fuels and moving towards cleaner renewables is the key to a better, more sustainable energy future. QS2: Blanket mandates often lead to unintended consequences. In this case, while the goal is one that I support, the consequence would be that consumers would ultimately bear a much higher cost on their electric bill. Renewable technology represents the promise of a cleaner, more sustainable energy future. Rather than dictating mandates, we need to be flexible and focus on incentivizing innovation that brings cost down.

-Senator Steve Oelrich (R), incumbent, DNR

Florida Senate District 20:

-Alan Hays (R), DNR

-Eunice Garbutt (D), DNR

Florida House of Representatives District 10:

-Rep. Leonard Bembry (D), incumbent, DNR

-David Feigin (R), challenger, DNR

Florida House of Representatives District 11:

-Elizabeth Porter (R), challenger, QS1: I am a strong proponent of the free-market system. I believe that energy companies should be able to provide the best product for the best price to the consumer, especially in these dire economic circumstances. I prefer promoting the development of alternative/renewable sources of energy via incentives such as tax breaks from the state/federal government. QS2: No, for the same reasons as stated above. I believe in the free market system and believe the American people and American companies can find the solutions to our energy needs; but I believe in rewarding companies for their ingenuity, not punishing them via excessive regulation.

-Rep. Debbie Boyd (D), incumbent, DNR

Florida House of Representatives District 12:

-Rep. Janet Adkins (R), unopposed, DNR

Florida House of Representatives District 19:

-Rep. Mike Weinstein (R) unopposed, QS1: I know from my experiences with the JEA here in Jacksonville how important a diversified mix of generations fuels is to the efficient and cost effective operations of your utility. I would not support a government mandate on the fuels you could use for generation. I support private market driven solutions to the challenges we face. QS2: I would not support a Renewable Energy Portfolio mandate for state utilities. I believe in the private market to find the appropriate solutions to our challenges. I would consider using limited incentives for research and development opportunities to work toward finding affordable cost effective alternatives.

Florida House of Representatives District 20:

-Rep. Bill Proctor (R), incumbent, QS1: No. QS2: No.

-Doug Courtney (D), challenger, QS1: My managerial background, (MBA Xavier University) demands diversity in acquisition of limited materials. Confining oneself to a limited supply of anything increases costs as suppliers take advantage of their position. I would support exploring alternatives to just emphasizing one product such as natural gas. The security of the Country and the State rely on the conversion to renewable energy sources. QS2: We can no longer be held hostage to oil or other finite fossil fuels. Ignoring the need to convert to renewable sources does not make the problem of fossil fuels go away. Renewable energy, like any new product, will be less effective and more costly in the initialization stages. But these costs will recede with more widespread use. Continued use of non-renewable sources of energy will increase cost more in the long run

Continued on page 6

Candidates respond to energy-related questions...

than renewable sources will in the short run. If we are going to mandate use of certain fuels we, the legislature, should do our best to mitigate the costs. Tax credits or grants for the use of these sources of energy must be considered.

Florida House of Representatives District 21:

-Rep. Charles Van Zant (R), unopposed, QS1:

First, I do NOT favor limiting the types of fuels a power generating supplier can use. I support coal and natural gas plus nuclear. I also support development of solar and using the energy from the Gulf Stream which flows at a substantially constant rate 24/7. Harvestable wind in Florida is almost nil except for a small area northeast of Leesburg. However, alternative energy is presently more costly and federal regulations are now pushing energy suppliers away from oil and coal. Unfortunately, this means until alternative energy becomes economical, we will be forced by Washington to use more natural gas, at a constantly rising cost. QS2: When I ran and passed the Off-Shore Drilling Bill in 2009, on the last day of Session, I received a message from the Senate saying that they had the votes and were ready to take up and pass the bill on the Senate floor. However, in order to do so, they wanted me to agree to attach their proposed Renewable Energy Portfolio Standard as an amendment. I refused because their Renewable Energy Portfolio Standard would raise every Floridians' electric bill.

Florida House of Representatives District 22:

-Keith Perry (R), QS1: No. We must keep all options available to the power generators. QS2: I would not support legislation allowing government to increase the already significant burden of electricity costs on consumers. Since Florida is a unique key state in terms of its growth and geographic makeup, however, it is important for legislators to closely analyze comprehensive alternative energy options, while understanding their precise impact on the taxpayers, both short-term and long-term. If this legislation were to pass, I would try to add amendments showing the tax payer/customer the exact increase in cost. I would also demand an increase to be based on actual cost, not theoretical assumptions based on inflation, shipping and other unpredictable costs in their analysis.

-Jon Paugh (D), DNR

Florida House of Representatives District 23:

-Rep. Chuck Chestnut (D), unopposed, DNR

Florida House of Representatives District 24:

-Dennis Baxley (R), QS1 and QS2: My answers are no and no. This is not the time to run up energy costs. Our priority should be economic recovery and adequate low cost energy during this economic recovery period.

-Michael Hageloh (D), DNR

Online vehicle & equipment auction begins Oct. 14

From page 1.

george@ggauctions.com.

Photos and information on each vehicle and other auction items will be posted on the George Gideon web site beginning on Oct. 14. The online auction will close the evening of Nov. 8. There will be an inspection day for the vehicles on Nov. 5 in Keystone Heights (at the Fleet Service bldg.) from noon to

3 p.m.

Here's a list of the vehicles that will be auctioned:

1980 Dun Ham 42' semi-flatbed; 1999 Chevy C3500 HD, Knapheide Utility unit; 2000 Chevy S-10 LWB; 2001 Chevy Lumina 4dr sedan; 2001 Ford Taurus 4dr sedan; 2002 Ford Taurus 4dr sedan; 2002 Chevy S-10 LWB; 2003 Chevy S-10 SWB (2); 2004 Dodge Intrepid 4dr

sedan; 2003 Chevy S-10 4X4 ext cab half-ton; 2004 Dodge W1500 Ram 4X4 (3); 2004 Ford Ranger SWB (2); 2005 Chevy Impala 4dr sedan; 2005 Chevy K1500 4X4 (2); 2005 Ford F550 (3); 2005 Chevy Colorado (10); 2005 Ford Ranger LWB; 2006 Chevy Colorado; 2006 Chevy Silverado; 2007 Chevy Colorado 4X2.

SCRIPTURE

To learn you must love discipline; it is stupid to hate correction. Proverbs 12:1

RECIPE CORNER

Delicious easy cobbler

2 cans pie filling (any flavor)
6 slices white bread (w/o crust)
1 cup sugar
3 tbsp. flour
1 egg beaten
1 stick melted butter

Spread pie filling into long casserole

dish. Lay bread squares over filling. Beat egg & mix into sugar, flour & butter. Pour over bread slices and bake 350 degrees for 30 minutes.

Our thanks to Lora Bunce of Keystone Heights for providing this month's recipe.
